

Geography

This term in Geography our question is, What ocean do we sit on? This means we are going to be learning about the UK and the oceans the surround it, but also about all of the different continents and oceans around the world.

Your task for today is to colour in the UK in 4 different colours for the 4 different countries within the UK and label each of the 4 countries. The 4 countries are England, Scotland, Wales and Ireland. Research where each of these countries are within the UK and colour each one a different colour. Your second task is to research what are the different oceans or seas that surround the UK. There are boxes for you to write in the names of the seas or oceans.
