

WALT: use arrays to multiply numbers by 2 and 3.

Watch the video on the school website to see how we can use arrays to multiply numbers. EG  $5 \times 2 =$

The number 5 tells us how many circles we need. The 2 is how many dots in each circle. Then count them up.

1)  $9 \times 2 = 18$

A large empty rectangular box for drawing an array to solve the multiplication problem  $9 \times 2 = 18$ .

2)  $12 \times 2 = 24$

A large empty rectangular box for drawing an array to solve the multiplication problem  $12 \times 2 = 24$ .

3)  $9 \times 3 = 27$

A large empty rectangular box for drawing an array to solve the multiplication problem  $9 \times 3 = 27$ .

4)  $11 \times 3 = 33$

A large empty rectangular box for drawing an array to solve the multiplication problem  $11 \times 3 = 33$ .
