Subtraction

| Example:                  |                                                                                    |
|---------------------------|------------------------------------------------------------------------------------|
| $\underline{20} - 5 = 15$ |  |

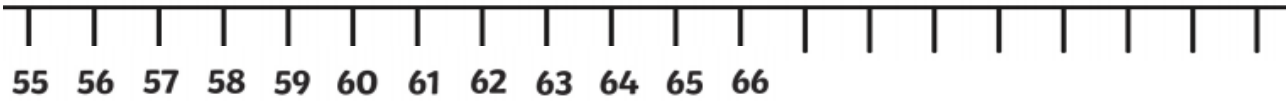

WALT: subtract using a number line.

To complete this activity, fill in any missing numbers on the number line. Then put a dot on the first number on the number line. In the example above that is 20. Then subtract the second number (5) by jumping back on the number line to find the answer.

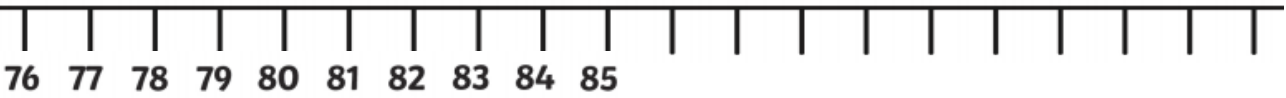

42-8=

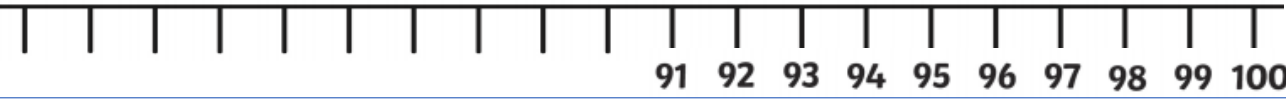

66-11=

89-12=

100-13=
