

WALT: use arrays to divide numbers by more than 3

Watch the video on the school website to see how we can use arrays to divide by 2 and 3. $4 \div 2 =$

The number 2 tells us how many circles we need. The 4 is how many we need to share equally. Then count the dots in ONE circle.

1) $16 \div 8 = 2$

--

2) $21 \div 7 = 3$

--

3) $25 \div 5 = 5$

--

4) $27 \div 9 = 3$

--
