

WALT: subtract using dienes.

Use your dienes and rods to represent the first number in the number sentence.

Then cross out the value of the second number. Then count what you have left to find your answer. You will be crossing tens, this means you will need to replace one of your tens rods for ten dots to allow you to cross them out.

EG $12 - 4 = 8$

$12 - 7 = 5$	$14 - 9 = 5$
$24 - 8 = 16$	$31 - 9 = 22$
$41 - 15 = 26$	$53 - 25 = 28$
